

THE 3 STAGES OF MENOPAUSE

✓ PERIMENOPAUSE

Perimenopause signifies the transitional time leading up to the final menstrual period, characterized by fluctuations and **a gradual decline in the levels of reproductive hormones**— estrogen and progesterone.

✓ MENOPAUSE

Menopause is defined when a woman has **not had a menstrual period for 12 consecutive months**. It signifies the end of the reproductive years and is a result of the natural decline in the ovarian production of hormones.

✓ POSTMENOPAUSE

Postmenopause is the stage of life *after* the 12 months of not having your menstrual period. This signifies the end of your reproductive years.

TOP 5 QUESTIONS TO ASK YOUR PROVIDER

There is nothing more powerful than a woman who has some questions. We believe you deserve a few answers. Here are 5 questions we recommend you ask your provider.

✓ **BASED ON MY AGE AND SYMPTOMS WHAT TESTS AND SCREENINGS SHOULD I CONSIDER?**

Find out if there are additional screenings or health checks you should prioritize during this stage.

✓ **WHAT TREATMENT OPTIONS ARE AVAILABLE FOR MANAGING MY SYMPTOMS?**

Explore both hormonal and non-hormonal therapies to find what's best for you.

✓ **IS MENOPAUSE HORMONE THERAPY AN OPTION FOR ME?**

Discuss the benefits, risks, and suitability of hormone therapy for managing menopause symptoms.

✓ **HOW CAN I MANAGE THE IMPACT OF PERI/MENOPAUSE ON MY OVERALL HEALTH?**

Discuss strategies for maintaining bone health, brain health, mental health, sexual health, cardiovascular health, and weight management.

✓ **ARE THERE LIFESTYLE CHANGES OR DIETARY ADJUSTMENTS THAT COULD HELP?**

Get advice on nutrition, sleep management, stress management, and exercise that can ease symptoms and improve well-being.
